Correctional psychology is an area of specialization that has recently enjoyed explosive growth along with the burgeoning United States prison population and the renewed interest in providing correctional rehabilitation programs that reduce inmate recidivism. This completely revised and updated second edition continues to provide an overview of empirical findings and practices in the field. The text focuses specifically on the psychologist's role within a correctional setting and clarifies the differences in working with inmates and correctional staff from populations more commonly encountered.

A two-volume handbook that explores the theories and practice of correctional psychology With contributions from an international panel of experts in the field, The Wiley International Handbook of Correctional Psychology offers a comprehensive and up-to-date review of the most relevant topics concerning the practice of psychology in correctional systems. The Handbook explores the foundations of correctional psychology and contains information on the history of the profession, the roles of psychology in a correctional setting and examines the implementation and evaluation of various interventions. It also covers a range of topics including psychological assessment in prisons, specific treatments and modalities as well as community interventions. This important handbook Offers the most comprehensive coverage on the topic of correctional psychology Contains contributions from leading experts from New Zealand, Australia, Europe, and North America Includes information on interventions and assessments in both community and imprisonment settings Presents chapters that explore contemporary issues and recent developments in the field Written for correctional psychologists, academics and students in correctional psychology and members of allied professional disciplines, The Wiley International Handbook of Correctional Psychology provides in-depth coverage of the most important elements of the field.

Correctional Mental Health is a broad-based, balanced guide for students who are learning to treat criminal offenders in a correctional mental health practice. Featuring a wide selection of readings, this edited text offers a thorough grounding in theory, current research, professional practice, and clinical experience. It emphasizes a biopsychosocial approach to caring for the estimated 20% of all U.S. prisoners who have a serious mental disorder. Providing a balance between theoretical and practical perspectives throughout, the text also provides readers with a big-picture framework for assessing current correctional mental health and criminal justice issues, offering clear strategies for addressing these challenges.

Describes the administrative, organizational, and ethical issues surrounding mental health services in a correctional facility.

The Routledge International Handbook of Forensic Psychology in Secure Settings is the first volume to identify, discuss and analyse the most important psychological issues within prisons and secure hospitals. Including contributions from leading researchers and practitioners from the UK, US, Australia and Canada, the book covers not only the key groups that forensic psychologists work with, but also the treatment options available to them, workplace issues unique to secure settings, and some of the wider topics that impact upon offender populations. The book is divided into four sections: population and issues, treatment, staff and workplace issues, contemporary issues for forensic application. With chapters offering both theoretical rigour and practical application, this is a unique resource that will be essential reading for any student, researcher or practitioner of forensic psychology or criminology. It will also be relevant for those interested in social policy and social care.

Many people believe that people are good or can become good, given the right set of circumstances. Managing maximum-security inmates-those that are generally described as the "worst of the worst"-changed my view. These inmates don't respond to basic correctional interventions, but must be managed.

Clinicians who work on the frontlines of correctional mental health know that the challenges are only increasing. Not only is the proportion of inmates with mental disorders growing at a rate that exceeds that of the correctional population as a whole, but this group is expanding at both ends of the aging continuum, so that increasing numbers of both geriatric and juvenile offenders require assessment and treatment. Changing patient demographics and evolving treatment modalities make it essential that psychiatrists, psychologists, social workers, nurses, and other professionals who serve the prison population have access to the most practical, up-to-date, and comprehensive resource. Handbook of Correctional Mental Health, now in an expanded, second edition, is that resource. This book addresses key concepts to ensure that the reader meets the current standard of care for inmates through all phases of the criminal justice system. In 20 state-of-the-art chapters, nationally recognized providers and correctional mental health experts address the most pressing issues facing clinicians. Unique to this edition, the Handbook: Summarizes the literature regarding unique populations observed in a correctional environment, thereby assisting the provider in tailoring treatment to various target populations. Provides a clear overview of both malpractice law and the concept of "deliberate indifference" that aids the reader in understanding the legal requirements for providing care and minimizing risks of lawsuits. Educates clinicians on how to differentiate feigned versus legitimate mental health symptoms, and how to understand and interpret inmate motivations for psychiatric malingering. Discusses important administrative aspects regarding documentation issues, quality assurance, and practicing under a consent decree. Provides useful tables throughout the text with key summary points emphasized. Includes five new, clinically focused chapters on the assessment and treatment of inmates with substance use disorders, geriatric offenders, juvenile offenders, inmates with self-injurious behaviors, offenders who have experienced various traumas during their lives, and inmates housed on maximum security units and death row. Other titles in the field are either out-of-date or limited in scope. By contrast, this new edition of Handbook of Correctional Mental Health includes everything mental health professionals need to provide the highest standard of care to this growing -- and complex -- patient population.

The Correctional Mental Health Handbook is the first book to offer a comprehensive overview of the services provided by correctional mental health professionals for the various populations found in correctional programs and facilities. Edited by Thomas J. Fagan and Robert K. Ax, experts with over 40 years of correctional mental health experience, this unique handbook is divided into three sections. The first section provides a flexible model for organizing mental health services based on staffing levels, facility mission, and local need. The second section considers typical offender problems in many correctional systems and how they are customarily managed. The third section presents various clinical and consultative activities offered by mental health professionals within correctional settings. While the main audience will be correctional mental health professionals and academics involved with training correctional mental health professionals, the Correctional Mental Health Handbook is also an ideal primer for graduate students studying corrections in criminal justice programs. For the student preparing to enter the correctional mental health profession, this indispensable text explains the general characteristics and treatment needs of specific inmate populations including: substance dependent offenders, female offenders, sexual predators, and juvenile offenders.

This textbook brings together leading experts to provide a comprehensive and practical review of common clinical, organisational, and ethical issues in correctional psychiatry.
