We use a novel household survey to investigate the effects of employer-based financial education on personal saving. We explore cross-sectional relations between the availability of employer-based financial education and various measures of asset accumulation, and we interpret these patterns in light of various potentially confounding factors.

Bernheim and Whinston's Microeconomics 2nd edition is uniquely designed to appeal to a variety of student learning styles. The content focuses on core principles of the intermediate microeconomics course: individuals and firms making decisions, competitive markets, and market failures, and is delivered in a combination of print, digital, and mobile formats appropriate for today's learner. McGraw-Hill's adaptive learning component, LearnSmart, provides assignable modules that help students master core concepts in each chapter. Scan codes within the chapters give students mobile access to online resources including videos on how to solve In-Text Exercises. Extensive end-of-

chapter material provides flexible options for both calculus and algebra-based courses. Bernheim and Whinston's completely integrated and accessible learning experience teaches students to apply and engage with a wide range of quantitative problems for more success in the intermediate microeconomics course. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

The past decade has witnessed a decline in saving throughout the developed world—the United States has the dubious distinction of leading the way. The consequences can be serious. For individuals, their own economic security and that of their families is jeopardized. For society, inadequate rates of saving have been blamed for a variety of ills—decreasing the competitive abilities of American industry, slowing capital accumulation, increasing our trade deficit, and forcing the sale of capital stock to foreign investors at bargain prices. Restoring acceptable rates of saving in the United States poses a major challenge to those who formulate national economic policy, especially since economists and

policymakers alike still understand little about what motivates people to save. In *National Saving and Economic Performance*, edited by B. Douglas Bernheim and John B. Shoven, that task is addressed by offering the results of new research, with recommendations for policies aimed to improve saving. Leading experts in diverse fields of economics debate the need for more accurate measurement of official saving data; examine how corporate decisions to retain or distribute earnings affect household-level consumption and saving; and investigate the effects of taxation on saving behavior, correlations between national saving and international investment over time, and the influence of economic

growth on saving. Presenting the most comprehensive and up-to-date research on saving, this volume will benefit both academic and government economists.

The eight chapters in this volume fall into three subject areas: government budget management and control, federal entitlement programs, and attempts to influence private sector behavior through tax code management. Policymakers are often hard-pressed to understand what economists have to say on policy issues, and scholars and students need to know what the latest research findings are and what questions remain unanswered. Fiscal Policy: Lessons from Economic Research

presents the work of leading contributors to the public finance literature. The papers were originally presented at a 1996 conference sponsored by the Robert D. Burch Center for Tax Policy and Public Finance at the University of California, Berkeley. Although the papers are broad in scope, they are not intended to be neutral, comprehensive surveys of the literature. Instead, authors were encouraged to focus on the issues they thought most important or interesting. The conference confirmed that on some questions there is a broad consensus, and on others there is strong disagreement. Because perspectives differ, after each paper two discussants offer their own views on the subject. More so

than in many conference volumes, these comments are an integral part of each presentation. Handbook of Behavioral Economics: Foundations and Applications presents the concepts and tools of behavioral economics. Its authors are all economists who share a belief that the objective of behavioral economics is to enrich, rather than to destroy or replace, standard economics. They provide authoritative perspectives on the value to economic inquiry of insights gained from psychology. Specific chapters in this first volume cover reference-dependent preferences, asset markets, household finance, corporate finance, public economics,

industrial organization, and structural behavioural economics. This Handbook provides authoritative summaries by experts in respective subfields regarding where behavioral economics has been; what it has so far accomplished; and its promise for the future. This taking-stock is just what Behavioral Economics needs at this stage of its so-far successful career. elderly. The contributors report on retirement saving of individuals and the saving that results from corporate funding of pension plans, and they examine particular aspects of the plans themselves from the employee's point of view. Steven F. Venti and David A. Wise offer a careful analysis of who contributes to IRAs and why. Benjamin M. Friedman and Mark Warshawsky look at the reasons more retirement saving is not used to purchase annuities. Personal saving through pension contribution is discussed by B. Douglas Bernheim and John B. Shoven in the context of recent government and corporate pension funding changes. Michael J. Boskin and John B. Shoven analyze indicators of the economic well-

being of the elderly, addressing the problem of why a large fraction of the elderly remain poor despite a general improvement in the economic status of the group as a whole. The relative merits of defined contribution versus defined benefit plans, with emphasis on the risk aspects of the two types of plans for the individual, are examined by Zvi Bodie, Alan J. Marcus, and Robert C. Merton. In the final paper, pension plans and worker turnover are the focus of the discussion by Edward P. Lazear and Robert L. Moore, who propose pension option value rather than the commonly used accrued pension wealth as a measure of pension value.

Over the last forty years, the majority of states have adopted consumer education policies, and a sizable minority have specifically mandated that high school students receive instruction on topics related to household financial decision-making (budgeting so forth). In this paper, we attempt to determine whether the curricula arising from these mandates have had any discernable effect on adult decisions regarding saving. Using a unique household survey, we exploit the variation in requirements both across states and over time to identify the effects of interest. The evidence indicates that mandates have significantly raised both exposure to financial curricula and subsequent asset accumulation

once exposed students reached adulthood. These effects appear to have been gradual rather than immediate -- a probable reflection of implementation lags.

In recent years, the United States has witnessed significant growth in programs of financial and retirement education in the workplace. This phenomenon provides an opportunity to assess the effects of targeted education programs on financial choices. This paper uses a novel household survey to develop econometric evidence on the efficacy of employer-based financial education. While our primary focus concerns the effects of these programs on saving (both in general and for the purposes of

retirement), we also examine a number of collateral issues. These include the circumstances under which employers offer, and employees participate in, financial education programs, and the effects of these programs on sources of information and advice concerning retirement planning. Our findings indicate that employer-based retirement education strongly influences household financial behavior.
