To reconstruct phylogeny, scientists use systematics, an analytical approach to understanding the diversity and relationships of living and extinct organisms. Evidence used to reconstruct phylogenies can be obtained from the fossil record and from morphological and biochemical similarities between organisms.

Biological Classification. Phylogeny. Biological Classification. Classification is how biologists sort out different species into taxa, or biological categories, based on their evolutionary ancestry. Through this system, different species are hierarchically classified into increasingly specific groupings, species being the most specific. Article Summary: Systematics is the classification of living things, based on their evolutionary relationships.
