The relative prosperity in U.S. agriculture that attended the passage of the Federal Agriculture Improvement and Reform Act of 1996 was followed by a general decline in U.S. agricultural prices from 1998 to 2000. This trend in declining prices continues through the year 2001, despite the movement toward more liberalized agricultural trade. Trade liberalization has been the result of a variety of factors, including the implementation of the Uruguay Round Agreement, and the establishment of a variety of regional trade agreements, such as the North America Free Trade Agreement. Needless to say, in the face of falling agricultural prices and increasingly liberalized agricultural trade, the agricultural policy scene is an extremely complex one, both locally and globally. The chapters in this volume look to understand this complexity by addressing the interaction between trade, the economic well-being of the farm sector, and the possibilities for future policy reform. The chapters collected here explore a number of different issues, including the operation of the tariff-rate quotas established under the Uruguay Round Agreement, the implications of sanitary and phytosanitary restrictions on trade, and the growing controversy over genetically modified organisms. In addition, several chapters analyze the interaction between agricultural trade and environmental concerns.

Due to population aging, calcific aortic valve disease (CAVD) has become the most common heart valve disease in Western countries. No therapies exist to slow this disease progression, and surgical valve

replacement is the only effective treatment. Calcific Aortic Valve Disease covers the contemporary understanding of basic valve biology and the mechanisms of CAVD, provides novel insights into the genetics, proteomics, and metabolomics of CAVD, depicts new strategies in heart valve tissue engineering and regenerative medicine, and explores current treatment approaches. As we are on the verge of understanding the mechanisms of CAVD, we hope that this book will enable readers to comprehend our current knowledge and focus on the possibility of preventing disease progression in the future.

This book presents an altogether new approach to writing and evaluating writing in digital media. It suggests that usability theory provides few tools for evaluating content, because usability theory assumes only one kind of writing on the Internet. The author suggests three models: user-centric (usability model), persuasion-centric (encouraging the reader to linger and be persuaded--Canon camera ads), and quality-centric (encouraging the reader to linger and learn or be entertained because of the quality of the writing--NASA.gov and YouTube). Designed for professional writers and writing students, this text provides a rubric for writing in digital media, but more importantly, it provides a rubric and vocabulary for identifying and explaining problems in copy that already exists. The Internet has become a pastiche of cut-and-paste content, often placed by non-writers to fill space for no particular reason or by computers with no oversight from humans (e.g., Amazon.com). Because these snippets are typically on topic (but often for the wrong purpose or audience), professional writers have difficulty identifying the problems and an even harder time explaining them. Finding an effective tool for identifying and explaining problems in digital content becomes a particularly important problem as writers increasingly struggle with growing complications in complex information systems (systems that create and manage their own content with little human intervention). Being able to look at a body of copy and immediately see that it is problematic is an important skill that is

lacking in a surprising number of professional writers.
