activity for developing successful Software Product Line projects. But it is difficult and complex task since architecture of software product line should be considered with variability.

## ~~Guidelines for Architecture Design of Software Product Line~~

Software Product Line engineering (SPL) has emerged in recent years as a planned approach for software reuse within families of related software products. In SPL, variability and commonality among different members of a family is studied and core assists (system architecture, software components, documentation, etc.) are designed accordingly to maximize reuse within the family members.

In the component-based distributed design phase, the component-based software architecture for the product line is developed. The software product line is structured into components, and the interfaces between the components are defined. The architecture of a product line contains kernel, optional, and variant components.

## Designing Software Product Lines with UML: From Use Cases ...

A software product line is a set of software-reliant systems that share a common, managed set of features satisfying a particular market or mission area, and are built from a common set of core assets in a prescribed way. Producing a set of related products as a product line has allowed organizations to achieve increased quality and significant reductions in cost and time to market.
