Fluid power is the technology in which pressurized fluid is been used to deal with power transmission, generation and control. Fluids are generally divided into two categories. They are liquids and gases. When liquids like water, mineral oil, were compressed in order to transmit the power, then such types of systems are called as Hydraulic systems.

The applications are organized around four motion control categories—force, position, velocity and acceleration—all typical output requirements of a vehicle, machine or system. Each application is also linked to NFPA's Fluid Power Product Locator. This locator, with its links to NFPA's manufacturing members, will facilitate your exploration into the world of fluid power.
