Partial Solutions: 1. The assertion is true for $n=1$ because $1/(1 \cdot 2) = 1/(1+1)$. If it is true for $n=k$, then it follows for $k+1$ because $k/(k+1) + 1/[(k+1)(k+2)] =$

Read Free Introduction Real Analysis Bartle

$(k+1)/(k+2)$. 2. The statement is true for $n=1$ because $[1^2 \cdot 1 \cdot 2]^2 = 1 = 1^3$. For the inductive step, use the fact that $1^2 k(k+1)^2 + (k+1)^3 = 1^2 (k+1)(k+2)^2$. 3. It is true for $n=1$ since $3=4 \cdot 1$.

Chapter 6 Solutions Section 6.2

Problem 6.2-4. Let $a_1; a_2; \dots; a_n$ be real numbers and let f be defined on \mathbb{R} by $f(x) = \sum_{i=0}^n (a_i x)^2$ for $x \in \mathbb{R}$: Find the unique point of relative minimum for f . Solution: The first derivative of f is: $f'(x) = 2 \sum_{i=1}^n (a_i x)$: Equating f' to zero, we find the relative extrema $c \in \mathbb{R}$

To see that a minimum value need not be attained, consider $f(x) := 1/(x^2 + 1)$. Apply Theorem 4.2.9 to $f(x)$. If $0 < a < b < \infty$, then $f((a, b)) = (a^2, b^2)$; if $-\infty < a < b < 0$, then $f((a, b)) = (b^2, a^2)$. If $a < 0 < b$, then $f((a, b))$ is not an open interval, but equals $[0, c)$ where c
