The printing system will call the `Printable.print()` method for page 0, 1,.. etc until the `print()` method returns `NO_SUCH_PAGE`. The `print()` method may be called with the same page index multiple times until the document is completed. This feature is applied when the user specifies attributes such as multiple copies with collate option.

we read here for the printf () method can also be applied to the format () method.

How to print a formatted text using printf() method in Java?

Java 1.4 introduced the Java Print Service API, which may be regarded as the flagship of (printer) printing services in Java. It addressed these issues and resolved the problems with a revamped API. The primary interfaces of these new services are PrintService and DocPrintJob, defined in the javax.print package. In addition to the introduction of new functionalities, the new APIs provide all the functionalities of the old print services as well.
