Linux Command Cheat Sheet - Guru99

If you want to get a simple list of all the directories and files inside a location, without extra info such as file size, etc., use `ls -R` command. This command will give a very long output (depending on how many files are there) as directory trees. Let's create some directories. If you want to create new directories the command is `mkdir`. By default the directory will be created in the current directory.
