About RMAN Channels. An RMAN channel represents one stream of data to a device type, and corresponds to one server session. Most backup and recovery commands in RMAN are executed by server sessions. As illustrated in

Where To Download Oracle 11g Rman User Guide

Figure 2-1, each channel establishes a connection from the RMAN client to a target or auxiliary database instance by starting a server session on the instance.

About RMAN Channels

The backup-and-restore strategies available with the User Managed method are discussed in the Oracle Database Backup and Recovery Advanced User's Guide and the Oracle Database Backup

and Recovery User's Guide for 11g. While User Managed backups are available for all supported Oracle versions, they are not supported in environments where Oracle's ASM or FRA is deployed.
