Order of Draw - Eurofins Scientific
It also discusses what can happen when the order of draw is disregarded. Additive carryover occurs when the needle filling a tube comes in contact with the blood/additive mixture as the tube fills, and transfers a minute amount of blood and additive into the next tube filled. This can occur with both syringe and vacuum draws.

Center for Phlebotomy Education:

The Order of Draw:

Observe the order of draw when collecting blood with the Microvette® to avoid contamination: 1.) EDTA 2.) Lithium Heparin / Lithium Heparin-Gel 3.) Fluoride 4.)

Blood Collection in Practice

There is a new order of draw which reflects guidelines issued by the Clinical and Laboratory Standards Institute. This order of draw must now be used for all tubes including the previous Greiner Vacuette® tubes. There is also new advice about filling citrate tubes. This is made clear in the blood tube guides.
