First, paper roll properties allow winding to extremely large-diameter build-up ratios, where the final roll's diameter may be 20x the core diameter. If tensioning torque is generated from the roll's center - the definition of center winding - the torque required (tension x radius) will have a torque range impossible for most motors.

Tightly wound paper above paper that is loosely wound: Wind tight at the start of the roll or gradually soften as the diameter increases. Thin web thickness at the edge of the roll causing a soft end: Keep cross-deckle caliper variation to a minimum. Severe impact: Provide for proper handling, storage and transport of roll.

This paper extends the winding function theory for nonuni-form air gap in rotating electric machinery. It shows that the winding function for nonuniform air gap differs with that used in the symmetrical case, while several papers employ the uni-form air-gap winding function in order to study the electric motors performance.
