Some institutions manage risks, while others contract to avoid them. We contrast these two methods in two different institutions — a passive institution, namely, a real estate mortgage investment conduit (REMIC), and one of the most actively managed financial firms, a commercial bank. Financial institutions can manage the risk exposures arising from lending and deposit-taking activities using financial derivatives; indeed, financial institutions are the largest users of derivatives, measured in terms of gross notional exposures.

[Risk Management in Financial Institutions](#)

According to this theory, financial institutions should completely hedge the tradable risks they face. Moreover, since risk management should not be a concern for unconstrained institutions, they conclude that more financially constrained institutions should hedge more or, in other words, that hedging should be decreasing with measures of networth.
