Examples in this document show how you can use SAS/ACCESS Interface to PC Files to read and write PC file data directly from SAS programs. They are not meant as examples for you to follow in designing files for any purpose. Samples can be found at the following:

#### SAS Help Center - Sample Data in This Document

Give technical and business users fast, easy access to the data they need. SAS/ACCESS provides seamless and transparent read, write and update rights to more than 60 data sources, including relational and nonrelational databases, PC files, Hadoop, Amazon Redshift and data warehouse appliances. Our out-of-the box solution empowers business users to use the technology with minimal training.

#### SAS/ACCESS Software | SAS

Documentation for SAS/ACCESS Interface to SAP ASE (formerly Sybase) and SAS/ACCESS Interface to SAP IQ (formerly Sybase IQ) is available in SAS/ACCESS 9.4 for Relational Databases: Reference. SAS 9.4 PC Files Server: Installation and Configuration Guide

#### SAS/ACCESS | SAS Support

Microsoft Access supports two file formats, .mdb and .accdb. Access 2000, 2002, and 2003 share the same .mdb file formats. ACCESS2000, ACCESS2002, and ACCESS2003 are treated as aliases for Access in SAS. For an existing .mdb file, you can specify DBMS=ACCESS on Windows platforms and SAS identifies the version for you.

#### SAS Help Center - Microsoft Access Database Files

n Starting in SAS 9.4, SAS/ACCESS can export Excel .xlsx files directly to UNIX. In this release, you can specify DBMS=XLSX to read and write to Excel workbooks under UNIX and Microsoft Windows directly without going through the SAS PC Files Server. n Beginning in SAS 9.4 SAS/ACCESS imports data from JMP files saved in JMP 7

#### SAS/ACCESS 9.4 Interface to PC Files - Reference - Fourth

SAS/ACCESS ® Software Features Seamless, transparent data access Broad access to data through an intuitive interface, regardless of where it's stored. Support for a wide range of databases and platforms, including big data databases, relational stores, data warehouses, mainframe sources and PC files.

#### SAS/ACCESS Software Features | SAS

This code exports a SAS data set named EMPLOYEE and creates a new Microsoft Access database file named test2000.mdb. Note that test2000.mdb does exist before the EXPORT procedure is submitted. SAS loads and names the table Employees. It then creates and saves it in the new file, test2000.mdb.

#### Microsoft Access Database Files | SAS/ACCESS(R) 9.3

SAS with stored access policy. A stored access policy is defined on a resource container, which can be a blob container, table, queue, or file share. The stored access policy can be used to manage constraints for one or more shared access signatures. When you associate a SAS with a stored access policy, the SAS inherits the constraints—the start time, expiry time, and permissions—defined for the stored access policy.
