(PDF) Soil and Water Conservation - ResearchGate

1.2 What is water conservation? This is a way of tapping as much water as possible and storing it in tanks or reservoirs. It allows water to sink into the soil increasing soil moisture levels. It ensures a protective cover of vegetation on the soil surface, slowing down the flow of running water and spreads the water over a large area.

runoff from excess rainfall in the reservoir of the soil for subsequent crop use; and this much water is kept out of streams, thereby contributing to flood reduction. Today these techniques of soil and water conservation are being practiced in many countries with much benefit to great numbers of people.

A Manual on Conservation of .Soil and Water

Data for this systematic review were collected from different literatures, reports and documents related to the topic. The review identified the major determinants of adoption of soil and water conservation practices such as Physical factors, psychological, socio-economic and institutional factors and also investments by farmers in soil and water conservation (SWC) practices

Finally, suggestions regarding soil and water conservation in the Loess Plateau are given. In order to control soil erosion and improve vegetation, a scientific and detailed land-use plan for the Loess Plateau has to be made, in the first instance, and then planning for wise use of water resources should be undertaken to control mass movement effectively and to improve land productivity.
