Taxonomy of Australian Mammals utilises the latest morphometric and genetic research to develop the most up to date and comprehensive revision of the taxonomy of Australian mammals undertaken to date. It proposes significant changes to the higher ranks of a number of groups and recognises several genera and species that have only very recently been identified as distinct.

Taxonomy of Australian Mammals, Stephen Jackson, Colin ...

Taxonomy of Australian Mammals consists of “a complete listing of all species, subspecies, and synonyms for all Australian mammals, both native and introduced as well as terrestrial and marine.” This is, of course, precisely the sort of thing that gives taxonomists a bad reputation among the general public, because it makes a book on something like “Insurance and Indemnity in Real Estate” actually look interesting.

Australian taxonomists discover more new species every year than almost any other country in the world. Even so, best estimates are that only 30% of Australian species have been discovered and named so far. Taxonomy Australia is working to accelerate the discovery of all Australia's species, before it's too late.

Taxonomy Of Australian Mammals - wakati.co

Mammalia is a class of animal within the phylum Chordata. Mammal classification has been through several iterations since Carl Linnaeus initially defined the class. No classification system is universally accepted; McKenna & Bell (1997) and Wilson & Reader (2005) provide useful recent compendiums. Many earlier ideas from Linnaeus et al. have been completely abandoned by modern taxonomists ...

Mammal classification - Wikipedia

Callistemon / ? k æ l ? ? s t i ? m ? n / is a genus of shrubs in the family Myrtaceae, first described as a genus in 1814. The entire genus is endemic to Australia but widely cultivated in many other regions and naturalised in scattered locations. Their status as a separate taxon is in doubt, some authorities accepting that the difference between callistemons and melaleucas is not ...
