This book brings insights from a leading industrial organizational psychologist who asserts that personality is real, and that it determines the careers of individuals and the fate of organizations. The author's goal is to increase the reader's ability to understand other people—how they are alike, how they are different, and why they do what they do.

Chapters explore both maladaptive and adaptive features of these traits, including how to address them in clinical settings. The final chapter ties the entire volume together with a thorough review of common themes, clinical implications, and research goals
