The statistic represents the market size of the global electronics
industry in 2016, sorted by country. The Japanese electronics industry
generated a total revenue of approximately 286 billion ...

We have, in recent decades, been able to witness a veritable revolution in the world economy, known as 'globalization'. Generally, the term is connected to the rapid increase of the free movement of goods, capital, people, ideas, information and knowledge around the globe. This book contributes to the meso- and micro-economic literature on innovation and entrepreneurship in the global economy.

Over the past two decades, the Department of Defense has been moving toward commercial-military integration for manufacturing, while at the same time, the printed circuit board industry has been moving steadily offshore. Today, many in DoD, the U.S. Congress, and the federal government lack a clear understanding of the importance of high-quality, trustworthy printed circuit boards (PrCBs) for properly functioning weapons and other defense systems and components. To help develop this understanding, DOD requested the NRC to identify and assess the key issues affecting PrCBs for military use. This report presents a discussion of how to ensure DOD's access to reliable printed circuits; an assessment of its vulnerability to the global printed circuit supply chain; and suggestions about ways to secure the design and manufacture of printed circuits. In addition, this report offers recommendations to help DoD (1) preserve existing systems' capabilities, (2) improve the military's access to currently available PrCBs, and (3) ensure access to future PrCB technology. The recommendations reflect the need to achieve these goals at reasonable cost and in concert with evolving environmental regulations.
