Given the transfer function $H(s)$ and input $X(s)$, then $Y(s) = H(s)X(s)$. If the input is $\delta(t)$, then $X(s) = 1$ and $Y(s) = H(s)$. Hence, the physical meaning of $H(s)$ is in fact the Laplace transform of the impulse response of the corresponding circuit. C.T. Pan 26. 12.4

LAPLACE TRANSFORM AND ITS APPLICATION IN CIRCUIT ANALYSIS

Laplace Transform . The Laplace Transform is a powerful tool that is very useful in Electrical Engineering. The transform allows equations in the "time domain" to be transformed into an equivalent equation in the Complex S Domain. The laplace transform is an integral transform, although the reader does not need to have a knowledge of integral calculus because all results will be provided.
